

# Personal Homepage Design Doc

## - Project Description

This project is a homepage to display my work experiences and skills. I used Bootstrap templates for the main structure, and developed a JavaScript component to improve UI/UX. On the main page (index.html), the user can see a picture of me with a single line of self-introduction. Then, the user can navigate to see my 'about' page for more details, my resume and my portfolio page to take a closer look at my experiences.

## - User Personas

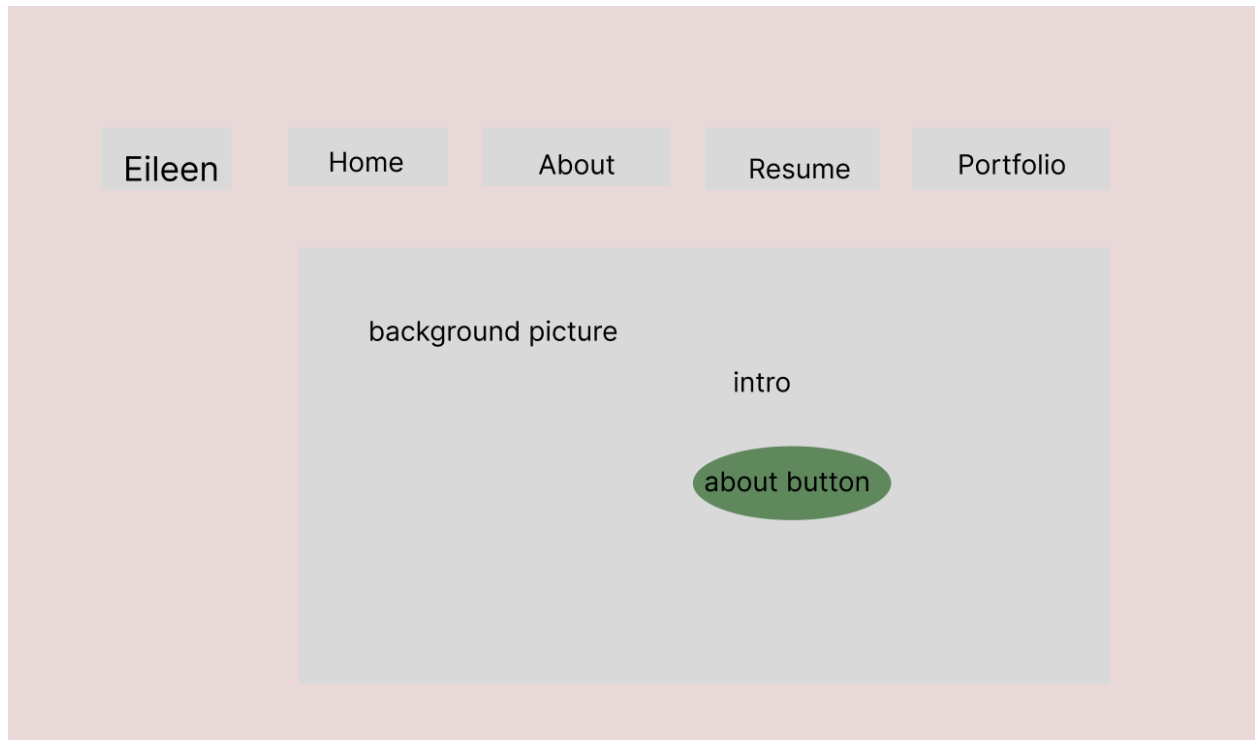

1. Tom, as a recruiter from a tech company located in the bay area, is looking for talented candidates for a software engineer position.
2. Jerry is the CEO of a local startup in the bay area who has less than 10 employees and is desperately looking for new talents.
3. Frank, as a student who just moved to the bay area, wants to make more connections with other computer science students.

## - User Stories

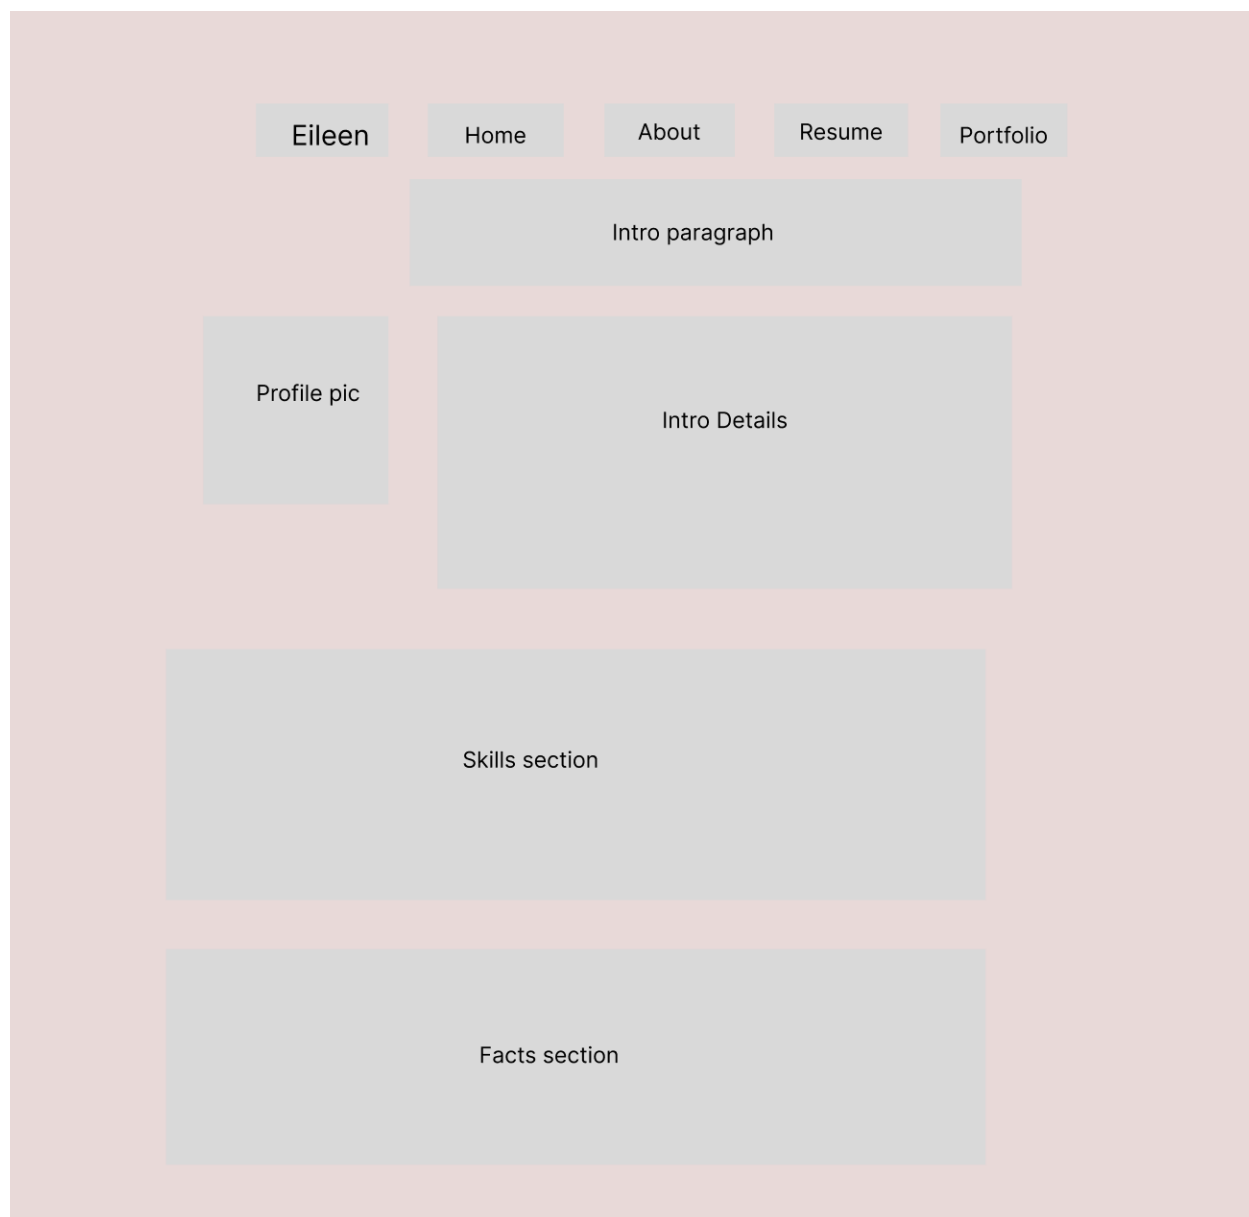

1. Tom has seen plenty of standard candidate profiles on LinkedIn and he finds them to be too identical. Now he wants to see something more interesting and unique about a candidate.
2. Jerry does not have enough time to go over candidate profiles like a recruiter so he wants something very straightforward which allows him to get to know about a candidate in no time.
3. Frank wants to connect with peers and see what kind of projects they have done before.

## - Design Mockups

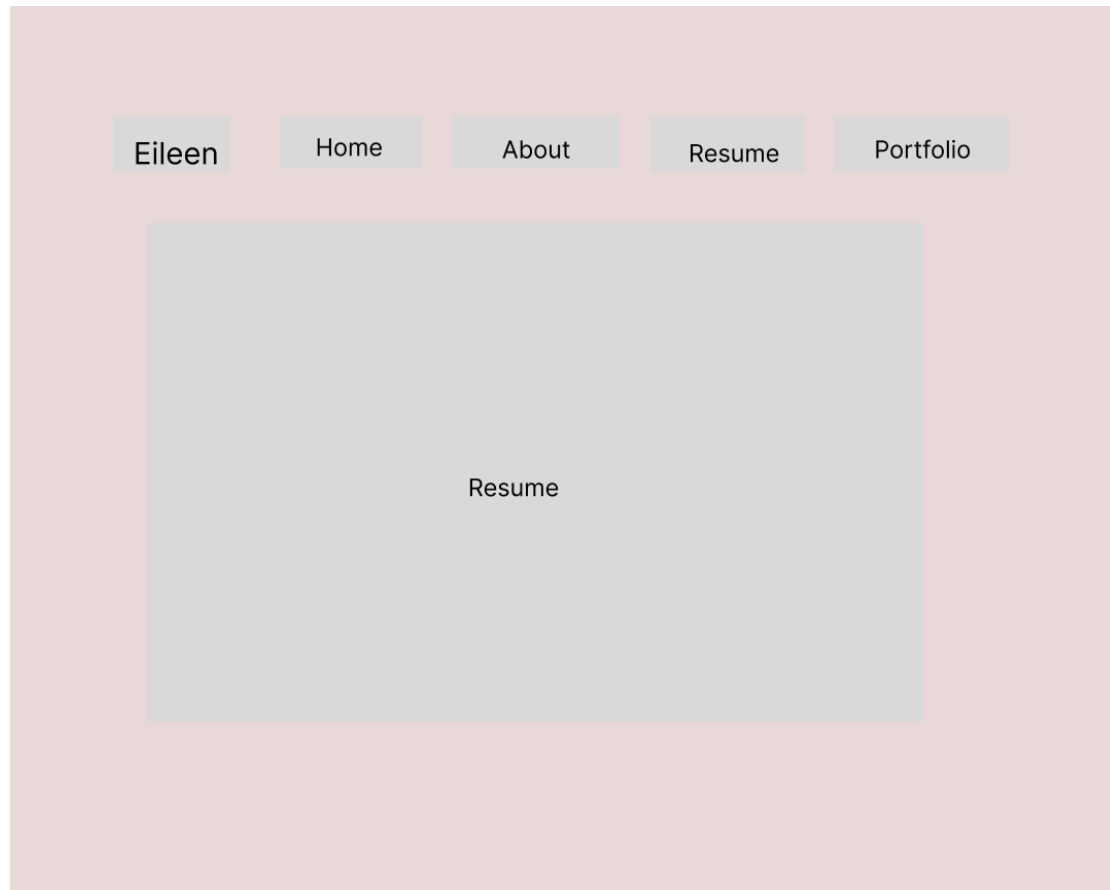

1. Homepage

## 2. About Page

### 3. Resume page

#### 4. Portfolio page
